

How GNAT Mapping works

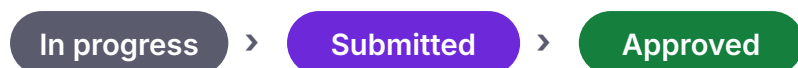

For the Regional Secretary

The system builds GNAT's map of the region: its districts, locals, and the schools and workplaces in each. It starts with you adding people, one level at a time.

Who does what, in order

Where each form is

A submitted form is locked while you check it. A returned form goes back with your note for the secretary to fix and submit again. An approved district is final.

When a secretary changes

Tap Remove secretary: their code stops working at once, and everything already filled in is kept. Then tap Add secretary and send the new person their code. District Secretaries do the same for their Local Secretaries.

Your data, in plain words

How it is collected, kept and protected

What is collected?

District and Local Secretaries	Name and phone number.
Workplaces	Name, category and Ghana Post GPS address (if given).
Admins (you)	Name, phone number, email address and password.
Activity	Who changed or downloaded what, and when.

Nothing else: no ID numbers, photos, locations of people, adverts or tracking.

Where is it kept?

Secretaries type everything on their phones and it goes straight into one database run by Railway. The website is delivered by Cloudflare. Their secure servers are outside Ghana.

How is it protected?

- Everything travels encrypted between the phone and the system.
- Access codes and passwords are stored scrambled. Nobody can read a password, not even Rootabytes.
- A code that is reset or removed stops working at once.
- Repeated wrong codes or passwords are blocked for a while.
- A copy of the database is saved every day.

Who can see it?

You and your region's admins	Everything in your region. Nothing from other regions.
District Secretary	Their own district and its locals.
Local Secretary	Their own local only.
Rootabytes (super admin)	Runs the system. It is not shown any regional data.

How long is it kept?

Secretaries' names and phone numbers are deleted or anonymised within 12 months after you approve the final structure. The approved list of districts, locals and workplaces is kept as GNAT's record.

What is my part?

- Keep downloads within GNAT: they contain names and phone numbers.
- Send each code only to the person it is for, and remove secretaries who leave.
