

Super Admin guide

You run the system: everything the Regional Secretary does, plus adding and removing admins.

Website: gnatashanti.rootabytes.com/admin

1 Set up your account

Sign in with the email and temporary password set on the server. Add your phone number and choose your own password.

2 Add an admin

Settings > Admins > Add admin: their name, WhatsApp number and region. The system makes a temporary password.

3 Send their sign-in

Tap WhatsApp or SMS to send the sign-in link, their phone number and temporary password from your own phone. It works for 7 days.

4 Their first sign-in

They sign in with their phone number, add their email and choose their own password. The temporary password then stops working.

5 Forgotten passwords

Settings > Admins > New password gives them a fresh temporary password. Send it the same way.

6 Remove access

Remove an admin who no longer needs access. They are signed out straight away.

7 Everything else

You can do everything in the Regional Secretary guide: invite, follow progress, review, codes and downloads.

Good to know

- Keep the super admin account to yourself. Give everyone else a regional admin account.
- The temporary password in the server settings works only once: after your first sign-in, your own password replaces it.
